Dear Friends,

It was a great joy to introduce <u>Tango</u> to my fellow Harvard alums at the HAA Board Cross Cohort Workshop last week. Thank you so much for diving in with great enthusiasm and for your illuminating and encouraging feedback.

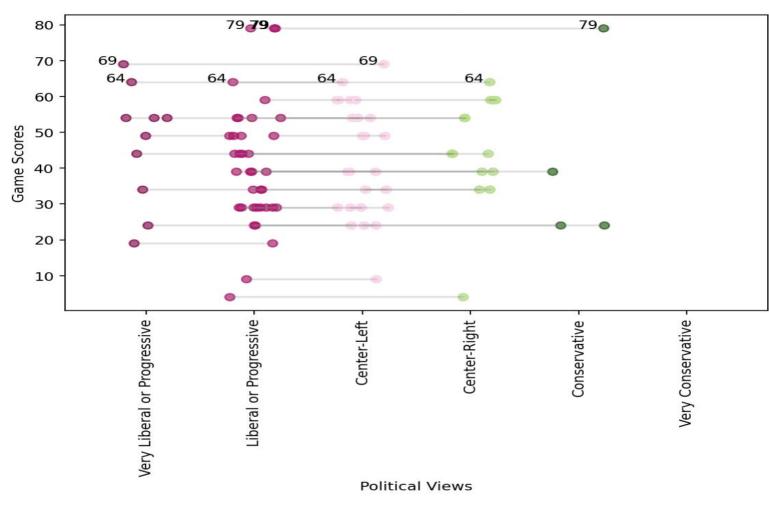

I'm sending these slides with information about the results of our game, followed by the slides I presented at the talk. Here is the <u>research paper</u> (under review) describing the results of our randomized controlled trials using Tango.

We would love to partner with Harvard alumni to bring Tango out into the world. If you would like to host a Tango for your organization or are otherwise interested in supporting our efforts, please drop us a message at letstango.org, or email me (jgreene@wjh.harvard.edu) or Tereese Smith (tereese.smith@globaldevincubator.org).

With appreciation and best wishes,

Joshua Greene

HAA Game Results

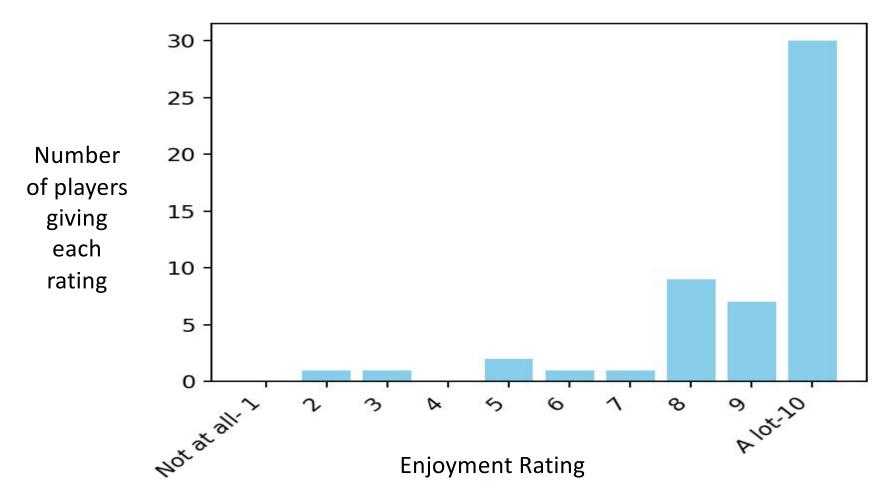

Top Performing Teams

- 1. The Deadpools
- 2. Elegant Barbell
- 3. Notmegger
- 4. Snap Eagle
- StrongSmarties

Each team is a bar in the graph above, and the width of the bar represents the ideological distance between the two teammates. The team score is on the y-axis. The horizontal locations and colors of the dots reflect each player's political self-description. As you can see, many of the top-performing teams had ideologically distinct partners. (There were 78 players, 52 of whom completed the endline survey.)

Game Enjoyment

This group *really* enjoyed the game! The **median and modal** enjoyment rating was **10/10** and the mean was **8.9/10**.

45(58%) players chose to share their contact details with their partners resulting in 28(35%) mutual connections after the game

And here's a word cloud reflecting comments on the game. And I love the comment below, which beautifully captures the Tango spirit

"It was quite fun to know that I was playing with someone who had very different political views from my own, and it didn't really matter in our ability to play the game. If anything, it was an advantage."

BUILDING BIGGER

AT HARVARD, IN THE UNITED STATES, AND GLOBALLY

Cooperative Contact

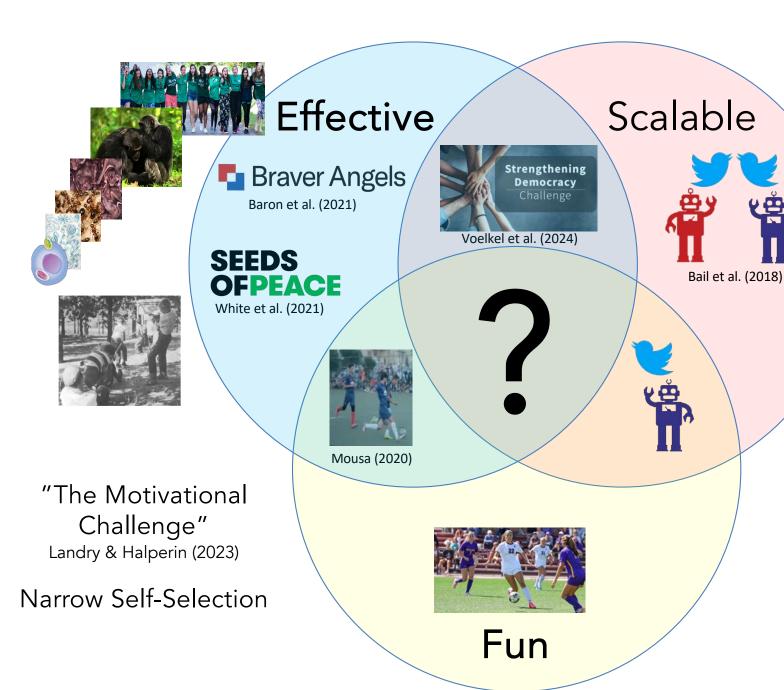

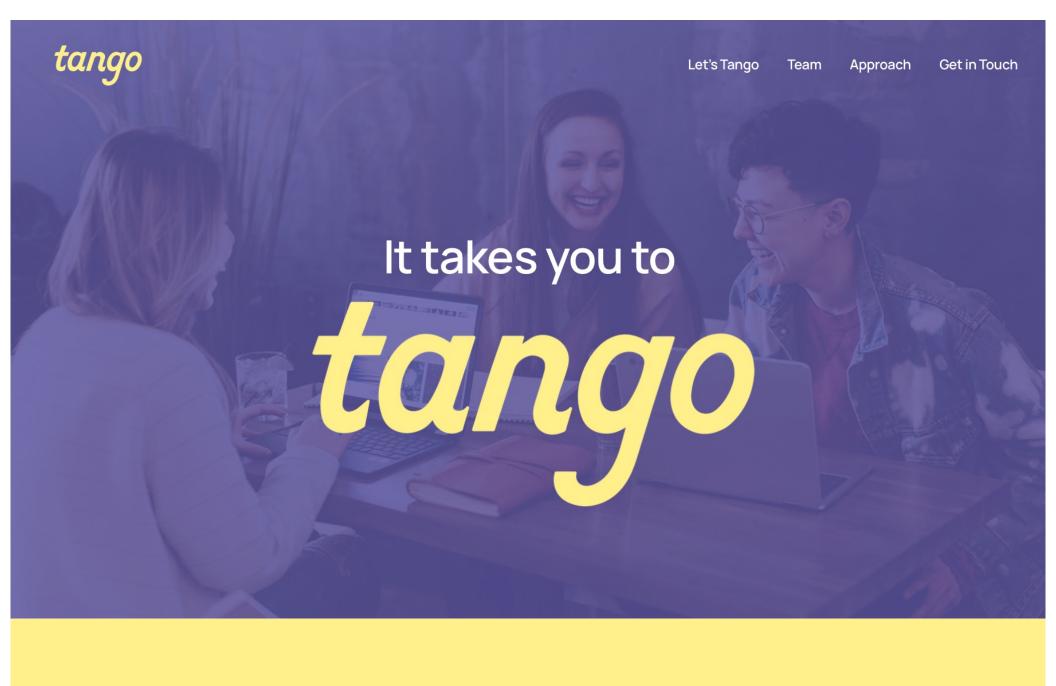

In a way that's scalable?

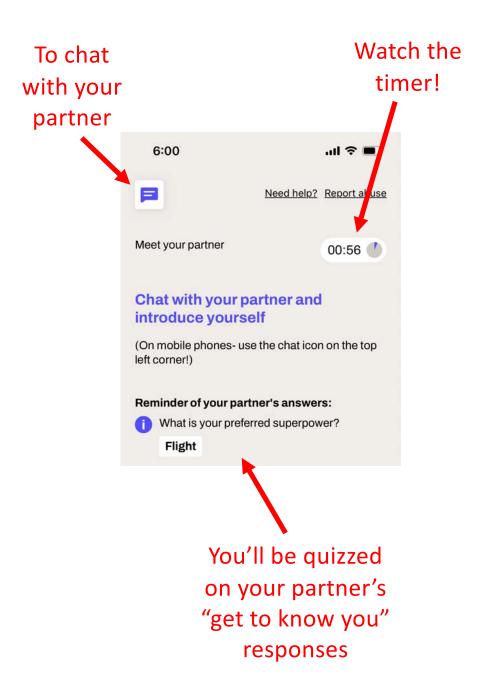

Contact with and without Cooperation: Allport, 1954; Sherif & Sherif, 1953; Pettigrew & Tropp, 2006; Broockman & Kalla, 2016; Ghosh et al., 2017; Lowe, 2021; Mousa, 2020; Rao, 2019; Weiss, 2021; Baron et al., 2021; Fishkin et al., 2021; Levendusky & Stecula, 2021; Santoro & Broockman, 2022.

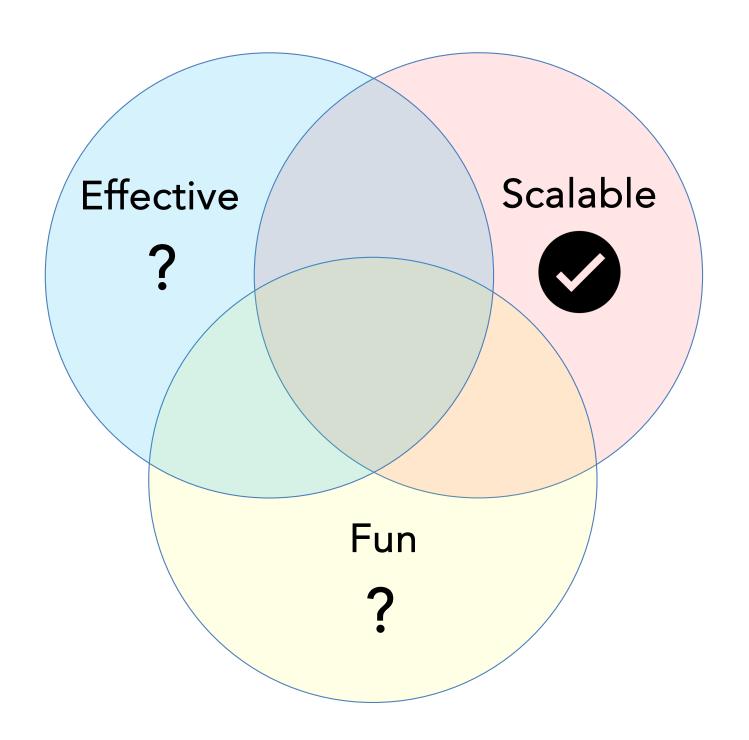

What do we Need?

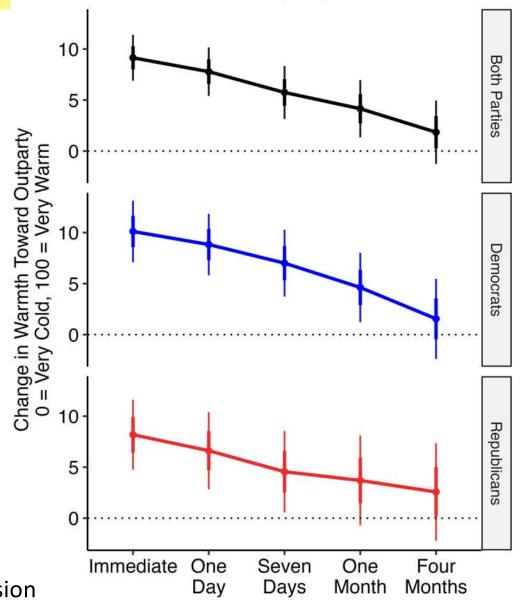

What's the opposite of divisive online content?

Playing with an outparty partner durably reduces negative feelings

9 degrees = ~19 years of increased animosity

5 RCTs

N=3,218

N=626 Pre-registered

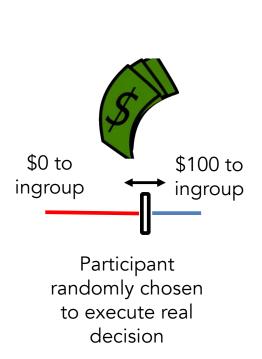

Manuscript under revision

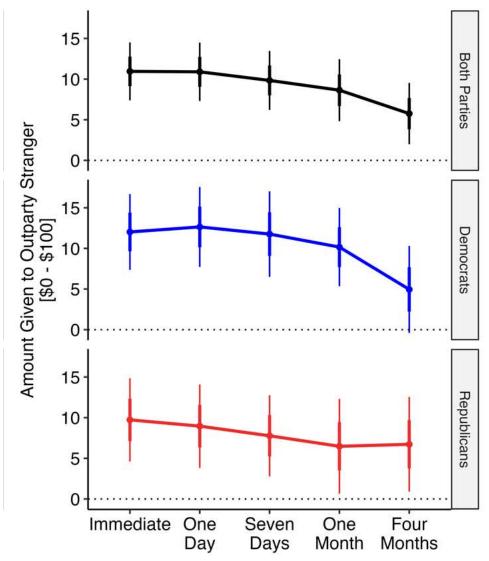

Feeling

thermometer (0-100)

Playing with an outparty partner durably increases generosity to the outparty

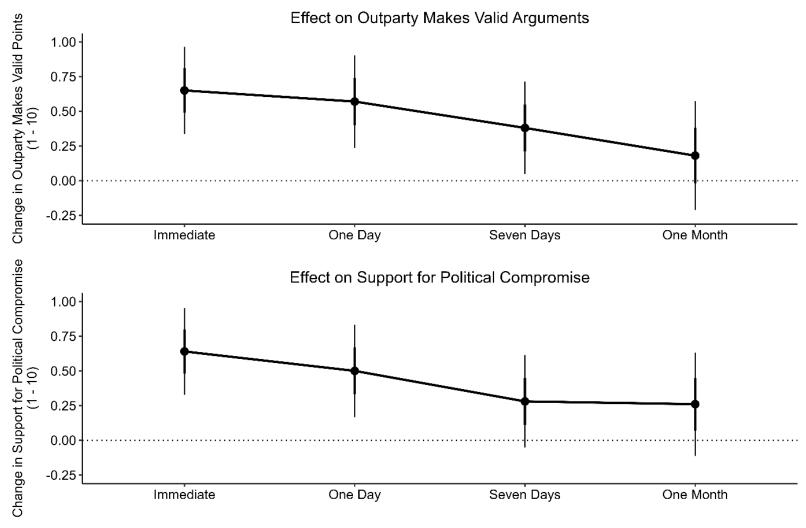

5 RCTs N=3,218

N=626 Pre-registered

Manuscript under revision

Playing with an outparty partner durably improves democratic attitudes

What makes it work?

enjoying the game feeling successful perceiving mutual respect seeing partner as typical of out-party

Median Enjoyment Rating of 10/10

"I loved this experiment.
...gives me further hope that we can work with others no matter what divides us"

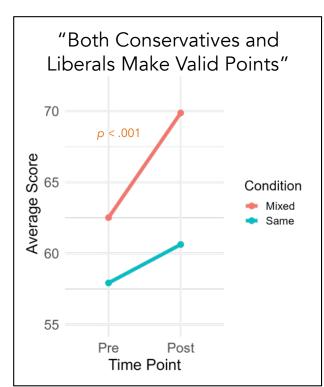

"it was eye opening"

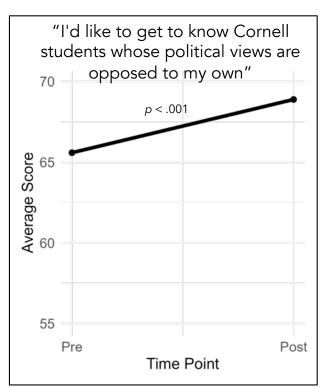

"It was amazing, engaging, well structured and fun... made me think about... my own prejudices and feelings"

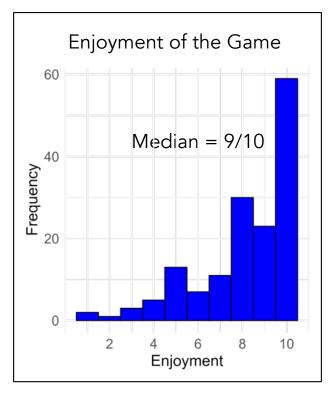

"made you stop and think and work together towards a common goal" "I enjoyed the f***
out of this
experiment.
Possibly the
coolest one I've
ever done out of
my 11,000 total...
Bravo, folks.
Bravo"

"it was fun as heck :)"

Behavior: 73% voluntarily shared contact info with partner in mixed pairs. 60% in similar pairs

N = 188 completed all measures (154 w/partners who completed)
